

ORIGINAL RESEARCH ARTICLE

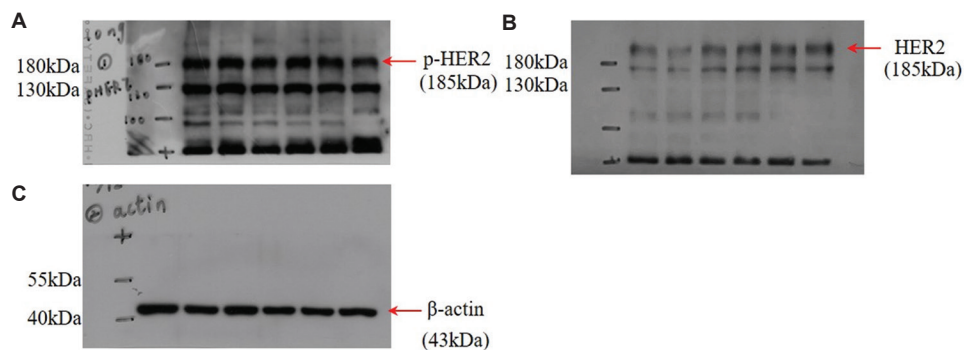

Continuous topical application of microencapsulated recombinant human epidermal growth factor does not promote the progression of established melanoma in animals

Supplementary File

Raw Western blot images

Raw Western blot images of Figure 5A. (A) Western blotting for p-EGFR (175 kDa), (B) Western blotting for EGFR (175 kDa), and (C) Western blotting for β-actin (43 kDa).

Raw Western blot images of Figure 5C. (A) Western blotting for p-HER2 (185kDa), (B) Western blotting for HER2 (185kDa), and (C) Western blotting for β-actin (43kDa).
