Research associate at the Department of Neurosciences, Biomedicine and Movement Sciences, University of Verona, Verona, Italy

Dear Colleagues,

Traditional Chinese Medicine (TCM) has long been esteemed for its holistic approach to healing, and its application in the treatment of neuropsychological diseases is an increasingly captivating area of study.

The aim of the special issue is to explore the potential of Traditional Chinese Medicine (TCM) in neuropsychological diseases, particularly through the integration of biofeedback techniques and the targeting of molecular pathways, and to provide a platform for researchers to disseminate their findings on the efficacy and mechanisms of action of TCM in modulating neuroinflammation, aligning with the journal's scope.

This Special Issue will welcome manuscripts that link the following themes:

- Efficacy of Traditional Chinese Medicine (TCM) in Neuroinflammation
- Mechanisms of Action through which TCM modulates neuroinflammation.
- Synergistic Effects of TCM and Western Medicine
- Exploring the potential for integrating biofeedback into combined treatment approaches
- Clinical Applications and Translational Research
- We look forward to receiving your original research articles and reviews.
